

SHRINKSLEEVE GUIDELINES

Dear Procab Customer,

Some of our High-end and Professional-series cables ship fitted with shrinksleeves. We would like to inform you that improper use of shrinksleeves can reduce your cable's lifespan.

Procab advises you to **never fix a shrinksleeve closer than 200mm from the cable's connector**, allowing enough room for the cable to bend naturally under strain. Attaching a shrinksleeve closer than 200mm from the connector will, in time, increase the odds of cable failure due to conductor breakage.

We take great pride in our craftsmanship, and correct usage will ensure that you'll get the maximum performance out of your Procab Cable.

The Procab Team,
